Product Information

Programmable magnetic switches MMS 22–PI1 PI1

Programmable. Precise. Easy assembly.

Programmable magnetic switch MMS 22–PI1

A magnetic switch is used to monitor the status of automation components. They detect the approach of a magnet without contact and above a certain switching value, they put out a digital value. The switching value can be programmed.

Field of application

Used for monitoring gripping and rotary modules, as well as linear modules, and robot accessories. Magnetic switches from SCHUNK detect metals without contact or wear, and are resistant to vibration, dust, and humidity. Magnetic switches are installed in slots and thus do not produce any additional interfering contours. For connection with a digital input module (utilization categorie DC–12).

Advantages – Your benefits

Individual switching point – without interfering contours The magnetic switch can be completely inserted, which means that no interfering contours arise due to overhanging sensor systems

Programmable within no time due to non-contact adjustment of the switching points and hysteresis

Adjustable hysteresis for precise position monitoring – even at very low strokes

Suitable for narrow installation spaces due to wired teaching with TeachTool plug

Version with LED display for control of the switching position directly at the sensor

Version with standard plug connector for fast and easy exchangeability of the extension cable

Very flexible cable in PUR version for a long service life

Installation into the sensor groove for space-saving, easy, and fast assembly on the product

Options and special information

High protection class: IP67 when plugged in, for use in clean or dusty environments or in case of contact with water. Operability in case of contact with other media (coolant, acids, bases, etc.) is often given, however cannot be guaranteed by SCHUNK.

Power supply: 10 – 30 V DC at < 10% residual ripple

Sources of interference: Sensors can be influenced by other magnetic fields in the immediate vicinity. Disturbing magnetic fields can be generated by motors, electric welders, permanent magnets or magnetized material (so-called soft magnets) such as hexagon socket wrenches, chips, etc.

Application example

① **Actuator**

② **MMS 22−PI1 C−slot sensor**

③ **MT magnet teaching tool**

SCHUNK offers more ...

The following components make the product MMS 22−PI1 even more productive – the suitable addition for the highest functionality, flexibility, reliability, and controlled production.

Plug teaching tool

Sensor cables

Sensor distributor

SST sensor tester

Pug-in teaching tool ST

(90) Pug-in teaching tool ST   (91) Sensor MMS 22-PI...

In addition to the magnetic teach-in tool included in the scope of delivery, the MMS 22-PI sensors can be taught via the plug teach-in tool. The plug teach in tool is inserted into the wiring from sensor to PLC. This makes teaching in possible even in confined spaces on the sensor. The plug teach in tool differs according to the version of the sensor with regard to switching points (1/2) and switching type (PNP / NPN).

Description	ID	
Plug teaching tool		
ST-MMS 22-PI1-NPN	0301027	
ST-MMS 22-PI1-PNP	0301025	

ⓘ The plug-in teaching tool is only required for teaching in and can be removed from the cabling again after. The sensor maintains its programming.
